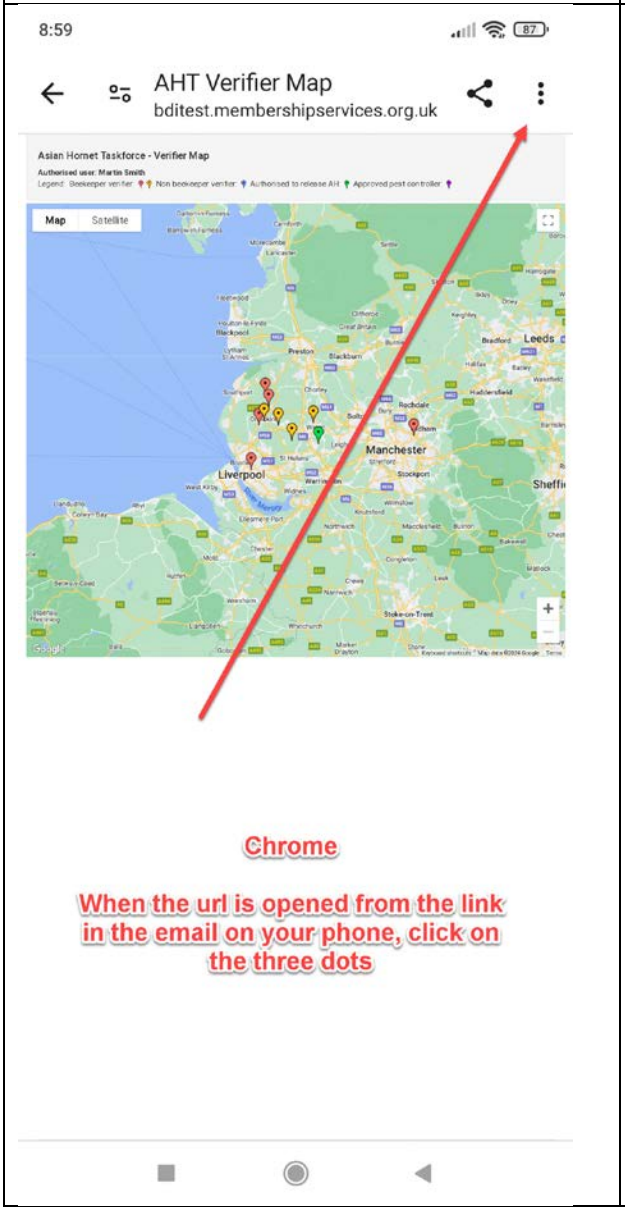
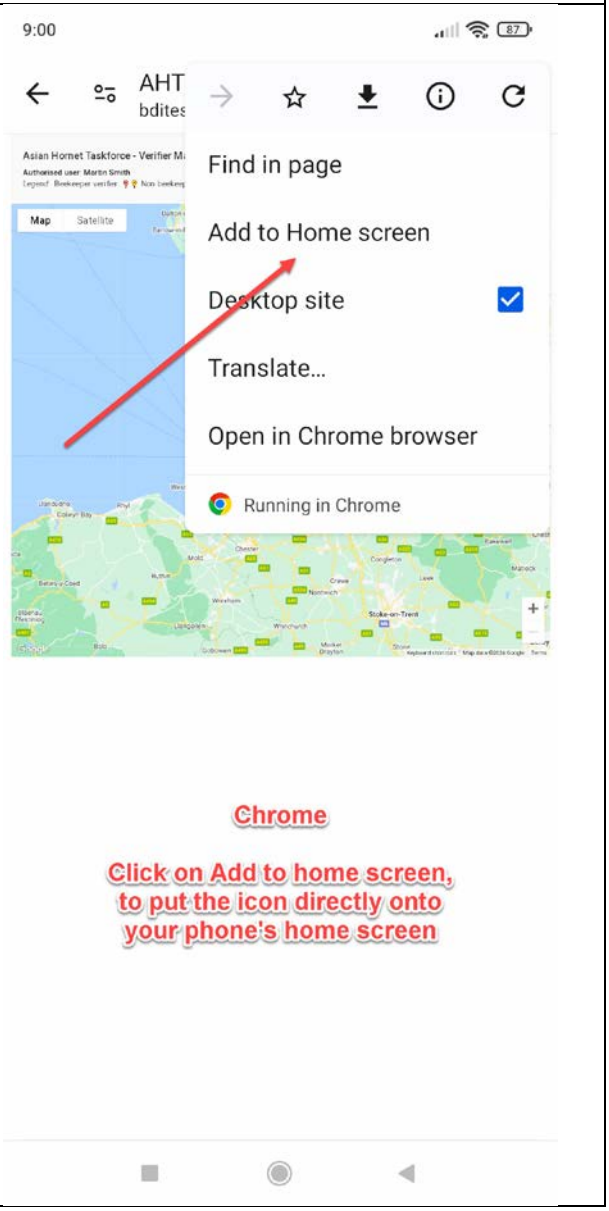
Adding the YL Hornet Maps as icons on your phone home screen

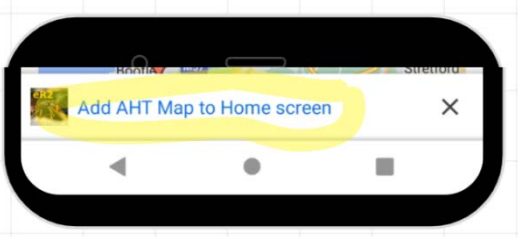
Whilst you can click on the URL you have been sent every time, it is easier to put the link directly on the home screen of your phone in the same way as other apps that you regularly use. This procedure is slightly different for Android and Apple phone.

Android phones – that usually use Chrome as their browser

1. Open the URL from the email on your phone, and click on the three dots	2. Click on Add to Home screen
	


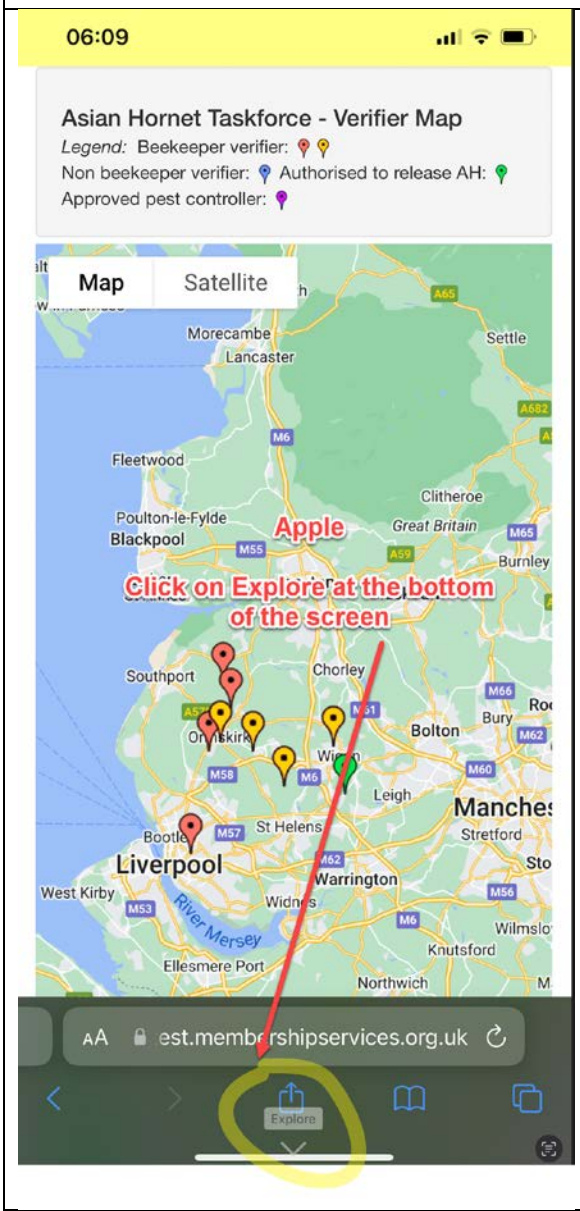


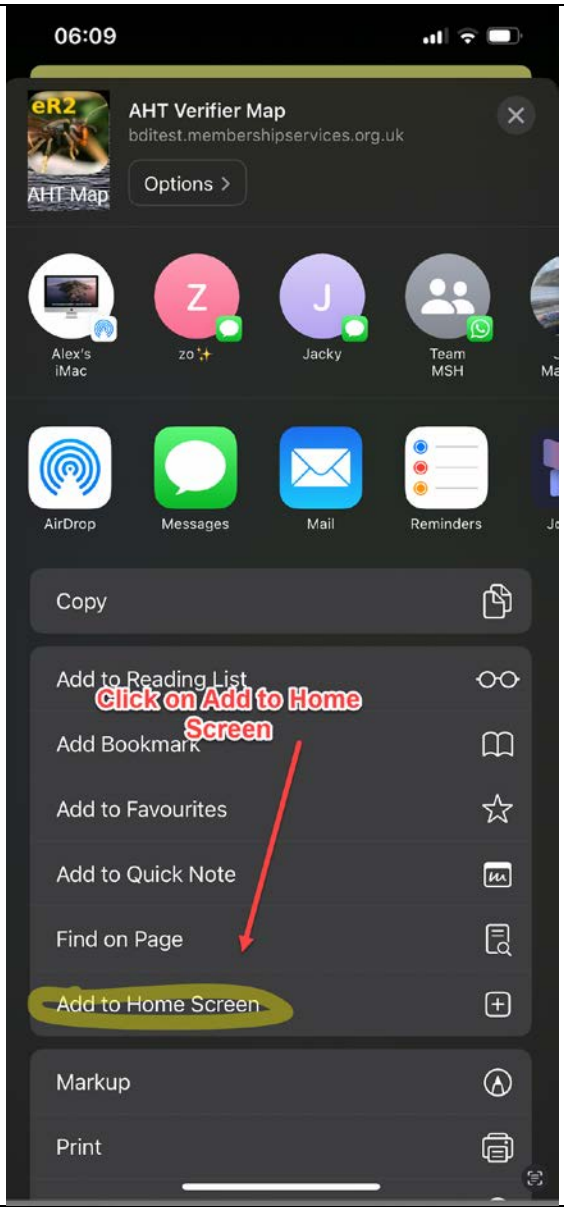
On some versions of Chrome, you May get a pop up to add the icon to home screen directly



Apple Phones – that usually use Safari as their browser

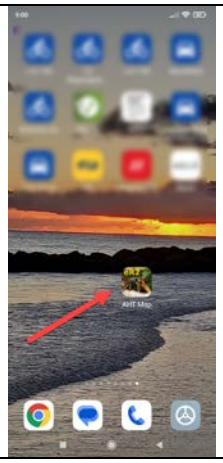
1. Open the URL from the email on your phone, and click on the explore button at the bottom of the screen	2. Click on Add to Home screen





This will add an icon to your home screen as follows.

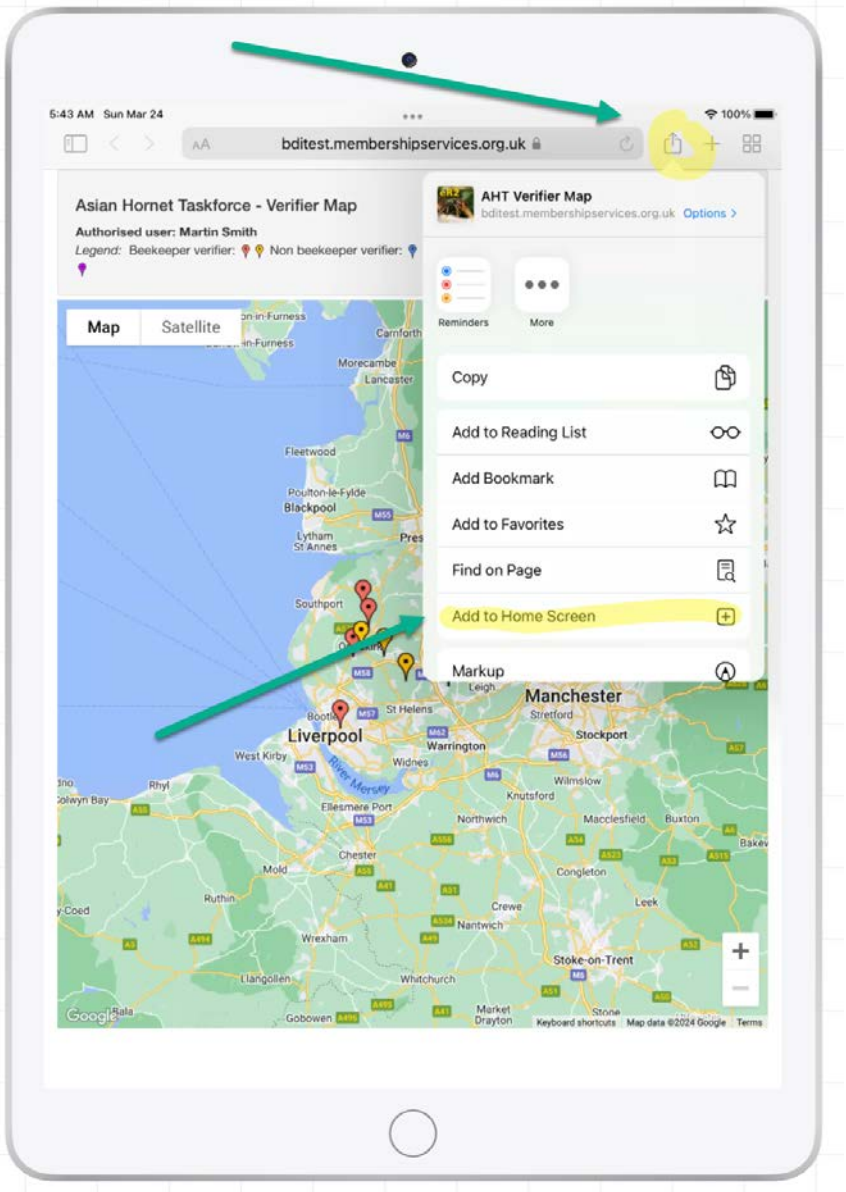
Clicking on this link will take you directly to the map



Apple iPads

On iPads there is a button at the top of the screen next to the URL listing.

Click on the button and then click on Add to Home Screen from the drop-down menu that appears



If you use another browser than Chrome (Android) or Safari (Apple) then please consult your phone instructions on how to add a URL to your home screen
